

# Elkhorn Area School District Improves its Regulatory Compliance with Arcserve Email Archiving Cloud

**INDUSTRY:** Education

**COMPANY:** Elkhorn Area School District

**SOLUTION:** Arcserve Email Archiving Cloud

Wisconsin's Elkhorn Area School District includes six elementary schools, middle schools, and high schools – with hundreds of staff members communicating primarily via email.

## Problem

With multiple archiving solutions making email retrieval cumbersome, Elkhorn Area School District decided to look for centralized, cost-effective, and streamlined archiving solution. They also were looking for a scalable solution, as the old one was constantly running out of disk space.

## Solution

Arcserve Email Archiving Cloud with its advanced search features allows for easy email eDiscovery. Its dashboard shows important metrics to monitor the archiving process. And with all-inclusive, capacity-based licensing, Elkhorn Area School District does not need to track current and predict number of future employees.

## Results

New, intuitive archiving solution from Arcserve allowed Elkhorn Area School District to centralize the email compliance processes for the entire district and solved storage capacity issues. It has also freed up time, allowing the technology department to refocus their time on more strategic tasks.

## The Problem

### Complexity of eDiscovery of emails from archives

Prior to using [Arcserve Email Archiving Cloud](#), the Elkhorn Area School District used several different archiving solutions, including Barracuda Archiving, that made email retrieval a cumbersome task for the technology department. “With our old archiving solutions, our technology team was spending too much time retrieving files. We needed a system that was more intuitive and easier to search,” said Randy Dricken, technology supervisor for the Elkhorn Area School District. In addition to needing a system that was more intuitive, the school district required more archiving space. Its old solution was constantly running out of disk space and didn’t offer efficient data compression.

*“With our old archiving solutions, our technology team was spending too much time retrieving files. We needed a system that was more intuitive and easier to search,”*

*- Randy Dricken, Technology Supervisor, Elkhorn Area School District*

## The Solution

### Centralized and streamlined email archiving in the cloud.

After a rigorous search, Randy and his technology team chose Arcserve Email Archiving Cloud, as its advanced search features best allowed the school district to archive its files offsite and retrieve them easily. Additionally, the platform's dashboard shared important key metrics so they could continuously keep tabs on their archives. Having a central hub for all email retrieval also allowed staff from each of the different schools to retrieve and manage their emails more efficiently.

*"The entire search and retrieval process is much more streamlined."*

*- Randy Dricken, Technology Supervisor, Elkhorn Area School District*

## The Result

### Significant cost and resource savings.

Even in the first few months of use, the Elkhorn Area School District have already seen immediate benefits of using Arcserve Email Archiving Cloud. They no longer waste time tracking current and future employees by paying for storage capacity with unlimited mailboxes. Instead of "per mailbox" models, the district saves money by only paying for what they use. Further, they no longer need to worry about running out of disk space and have cut down on the time they used to spend on email retrieval. "The entire search and retrieval process is much more streamlined," Randy noted. "Our team was impressed with how easy it was to conduct a search and find what you were looking for." Now, the technology department can refocus their time on more strategic tasks, rather than waste time on administrative functions. Randy also shared that the onboarding process was painless, noting the entire Arcserve team was very helpful and the technology department was able to correspond directly with a product engineer to address any set up issues they had.

*"Our team was impressed with how easy it was to conduct a search and find what you were looking for."*

*- Randy Dricken, Technology Supervisor, Elkhorn Area School District*

## About Arcserve Email Archiving Cloud

Purpose-built cloud email archiving gives users peace of mind and full compliance with regulatory and legal obligations. With Arcserve Email Archiving Cloud, you will:

- Pay for only what you use with pricing based on storage capacity – not number of mailboxes
- Protect unlimited mailboxes without tracking current, present and future employees
- Achieve added security and privacy with a dedicated virtual server and custom SSL secured login page
- Easily migrate historical messages from your mail server or existing archiving systems
- Benefit from significant savings and more features compared to Microsoft Office 365 or Google G Suite archiving solutions
